

GET IN THE LOOP

- 1 **We are the innovators.** If you look closely at the past decade of hearing loop history in the US, we are the blueprint other companies used to build their businesses!
- 2 **Designed and built in the USA** - created for North American sound and electric systems. Installers and hearing aid users that have experienced the **inLOOP difference** prefer the ease of installation, and clear high fidelity signal!
- 3 **inLOOP provides a lifetime warranty** on professional grade products, and the best warranty in the industry on commercial and consumer grade products!

The logo for inLOOP is a large, light-colored oval containing the word "inloop" in a lowercase, sans-serif font. The "i" and "n" are joined, as are the "o" and "o".

We are a responsive midwestern manufacturing company that focuses our resources on the development, technology and advancement of the national hearing loop initiative. At inLOOP, our primary purpose has always been to help people hear better. We are not only dedicated to people that are hard of hearing, we are committed to outstanding business practices, pride in our country and the value of being of service.

Our customers are our partners in the advancement of audio frequency induction loop technology. With the help of our trained installers, **inLOOP perfected Class D amplifiers for hearing loops a few years ago.** Today, inLOOP is two steps beyond constant current technology with the **inLOOP Digital High Efficiency Audio Frequency Induction Amplifier.** **The only hearing loop system that utilizes a digital processor to balance the antenna impedance and provide a superior induction field with little noise and wasted energy.**

inLOOP created the first Audio Frequency Induction Loop Design and Installation training program in the U.S. in 2008. We have hosted 36 IEC compliance classes to more than 250 installers at our dedicated facility in Spring Lake, MI, and more than twice that number of condensed sessions **offsite to over a thousand attendees.** **Because we are dedicated to quality installation practices, inLOOP in-house education has always been free.** Our **classes are based on IEC 60118-4, and provide scientific background and instruction for every hearing loops configuration, with hands on training** as well as experience based illustration. Take a look at our curriculum at www.hearingwell.org

We were the first company to recognize the need to have a qualified hearing professional connected to each hearing loop. This insures a quality connection between the hearing aid and loop, while bringing business to the hearing center. We have been exhibiting at hearing conferences and teaching courses on hearing loops for 6 years. At the beginning of this decade we partnered with like minded companies and created a non-profit that **promotes hearing loops by providing education and support for** individuals and companies that are interested in the technology.
